SUMMARY

Software developer with 4+ years of experience across frontend and fullstack roles, delivering web applications in Agile environments. Comfortable owning products end-to-end — from architecture to user-facing interfaces. Interested in technically demanding domains where software directly enables research or decision-making.

EDUCATION

Université de Lille

Licence MIAHS (Maths and CS with Applications in the Social Sciences)

Lille, France

Sept. 2023 – July 2026

SPbSTU (Polytechnical university)

Bachelor in Business informatics

Saint-Petersburg, Russia

Sept. 2021 – June 2023

EXPERIENCE

Fullstack Developer

[*Ligand Pro*](#) - drug discovery platform

May 2026 – Aug 2026

Remote

- Building a research platform for medicinal and computational chemists: React/TypeScript frontend with Mol* 3D visualization, FastAPI + PostgreSQL/RDKit backend with async job queue for GPU-backed computations (docking, retrosynthesis, molecule generation).
- Designed a Rowan-inspired workspace model with project-scoped context, extensible model registry for onboarding new computational tools via config, and token-based billing with per-run cost estimation.

Frontend Developer

[*Munk*](#) - last-minute deals

Sept 2025 – Present

Remote

- Built an **SSR** React web app for last-minute, location-based service deals (Too Good To Go-style), integrating map APIs for search and adding crisp micro-animations. Also worked on the partner portal to manage discounts, perform visit activations, and process e-signature workflows.

Fullstack developer (internship)

[*Viziosense*](#) - IoT platform

May 2025 – Aug 2025

EuraTechnologies, Lille, France

- Shipped a new version of the canvas-based annotation tools, gathering requirements, validating mockups with users, and rebuilding the system in **Angular** + **Fabric.js**; published a working demo in the [docs](#)
- Partnered with stakeholders to translate **business requirements** into deliverables, aligning scope, acceptance criteria. Collaborated in a multicultural, cross-functional startup team
- Reconfigured **Docker** layer usage and caching to cut image build times by **50%** on average, enabling faster iteration cycles on IoT devices

Frontend Developer

[*Flatsharing LLC*](#) - rental service

June 2023 – Aug 2024

Remote

- Collaborated within an Agile Scrum team to develop a scalable rental service platform, creating over 23 adaptive, user-friendly pages via **Vue3**, Vite, and Nuxt to ensure a seamless experience across devices
- Enhanced interactive map functionality with smart caching, boosting geo-point load efficiency by 40% and improving performance during high-traffic periods

Fullstack Developer

[*Ivankovlab, ProDDG*](#) – database of $\Delta\Delta G$ datasets and predictors

Aug 2022 – March 2023

Part-time, Remote

- Shipped Vue2 frontend for browsing and querying $\Delta\Delta G$ datasets and predictors.
- Built Koa/Node.js + MongoDB backend; upgraded data layer to handle 600K records (46x growth) and added caching, boosting throughput from 1 to 200 RPS.
